

Fall Restraint Systems

Rigid Lifelines™ Fall Restraint systems provide fall restraint on a fixed path, allowing a worker to perform their job with ease but never allowing them to reach the fall hazard. Our fall restraint systems are made up of a minimum of two mounting points, and a piece of track and trolley. Workers wear a harness, and attach an application appropriate fixed length strap (sometimes called a “dog leash”) to the harness, and then to the trolley. Fall restraint systems can be custom designed for long runs or job specific path designs, including curves or complete circles.

{NOTE: Our systems are designed with a maximum worker load of 400lbs (on one person systems) when used with 900lb Maximum Arresting Force self-retracting lanyards and properly rated full body harnesses and connecting hardware. Custom systems are available for multiple workers; please inquire with our sales department for more information.}

Never leave your workers unprotected near a fall hazard!

- Side mounted enclosed rigid track design with side mount brackets provides stable yet versatile fall protection for single or multiple workers.
- 180° pivoting side mount trolley provides easy movement along the track with no possibility of hang ups on support brackets.

Choose the options that work for you!

- Custom fall restraint systems are available to support multiple workers.
- Curved track sections accommodate curved paths or circular application layouts.
- Optional Mylar weather stripping protects the system during outdoor use or heavy dust and paint applications.
- Steel or optional stainless steel construction assures strength and durability.
- Layered primer with single and double enamel coatings, epoxy coatings, and galvanized finishes protect against rust and wear.
