TRAVELING BRIDGE

Assembly and Operation Instruction Manual

Ceiling-Mounted Traveling Bridge

This manual is for various mounting types and plain and trussed track profiles.
RIGID LIFELINES’ CONDITIONS OF USE AND WARNING STATEMENT

1. Read, understand, and follow the manual, assembly drawings, and warnings provided with your system before beginning installation.

2. This manual, and any other instructions, must be provided to the users of this equipment. The user must understand the equipment’s proper use and limitations.

3. A fall event can result in serious injury or death. This equipment, when used properly, reduces the chances of those outcomes.

4. Always perform a hazard analysis before use that will identify impact hazards, swing hazards, or any other hazards that may exist. Address and correct all hazards before use.

5. Always have a written rescue plan that defines who will rescue a fallen worker, what equipment will be used, and optimum rescue response time. If the same system will be used for rescue, a minimum of a two-man system must be specified.

6. Follow all current requirements of ANSI Z359 (or CSA Z259 in Canada).

7. Each component and system must be employed and maintained in accordance with all OSHA and ANSI standards.

8. Per OSHA and ANSI (or CSA Z259 in Canada) requirements, designate a competent person who can fulfill obligations of all regulations.

9. Note the maximum number of users and weight capacities are listed on a label on the system. Exceeding the capacities listed on this label can result in serious injury or death.

10. Always check for overhead hazards, such as power lines, trees, overhead structures, or walls, before using or moving system.

11. Any component replacement, addition, or change to any portion of the system must be evaluated by a Qualified Person as defined by OSHA standards.

12. Never use this system for material handling.

13. Never use the system with scaffolding.

14. Never use the system alone without a monitor. Use the buddy system when using fall protection. The monitor, or “buddy,” does not need to be attached to the system, but just nearby supervising.

15. Consult with a qualified person for minimum fitness requirements for workers. Determination of minimum fitness levels of workers prior to use of system is by others.

16. For mobile systems—it is the responsibility of the user and their management’s Competent Person to determine that the system’s base is level, the masts are plumb, and that the entire, leveled system is stable before every use.

17. For moveable track systems—Always use the system in work spaces that allow you to move the system’s runway as close as possible to the center of the work area.

18. **Before each use**, inspect the system for bent, broken, cracked, or missing components.

19. A competent person must thoroughly inspect the system annually and **after each fall event**.

20. There should never be any type of loading past the end stops for any reason.

21. When connecting track sections, track splice and truss splice plates are required. For trussed track, splice joint centers must be within 48 inches of the hanger support centers unless otherwise specified. For plain track, splice track centers must be within 18 inches of the hanger support centers unless otherwise specified.

22. Systems with flush clamp hangers do not require sway bracing. However, all systems mounted to the ceiling must be laterally and longitudinally braced with bracing provided by others.
23. If supplied, all drive systems are chain driven, and as a result, will experience some backlash in the drive assembly. Although backlash cannot be fully eliminated, it can be reduced by tightening the drive chain. Torque limiters, if supplied, require special attention. Most drive issues result from improper torque limiter adjustment or installation.

24. It is the customer’s responsibility to confirm that the system and components will work in and are acceptable for their specific application and environment.

25. For foundation-mounted systems, bracing is not required for non-seismic applications. However, if any sway is perceived as undesirable, lateral bracing can be installed to the system by others. To achieve desired rigidity for a specific application, Rigid Lifelines® recommends consulting a professional engineer in your area to satisfy all codes and ordinances. For foundation-mounted systems, chemical anchor bolts supplied by others are required and must provide approximately 7000-pound pull-out force. More accurate pull-out forces are available upon request.

26. Engineering of any attachment points must be done by others.

27. Component appearances and dimensions shown are approximate and subject to change without notice. All catalog dimensions are developed using standard components for the spans and capacities. Substitution of optional trolleys or other components will affect certain dimensions.

28. All Rigid Lifelines’ Anchor Track™ Systems meet or exceed OSHA and ANSI requirements.

29. Never load the track at an angle greater than specified in the system’s user manual.

30. Never use the system with the attachment point below the D-Ring of the harness.

31. Only the following self-retracting lanyard (SRL) design specifications are acceptable for use on Rigid Lifelines’ Anchor Track Systems:
   a) 900-pound maximum average arresting force (MAAF)
   b) 4.5 feet-per-second lock up speed
   c) Disk or drum braking mechanism
   d) Wire rope SRL’s can be used for indoor or outdoor applications
   e) Fabric or web SRL’s can be used only for indoor applications

32. The following SRL’s absorbers are not acceptable: rip-stitch packs, shock packs, or stretchable energy.

33. Choose the shortest length SRL that will allow the workers to perform their job function. The shortest length SRL will reduce total fall distance by reducing “cable cinching” on the internal SRL pulley. Fabric lanyards stretch under load. The longer the lanyard, the longer the stretch.

34. Never use metallic cables or metallic SRL’s around electrical power sources.

35. Only an ANSI (or CSA in Canada) full-body harness is acceptable for use on Rigid Lifelines’ Anchor Track Systems.

36. Never use body belts on this system.

37. Never add additional carabiners, D-Rings, shackles, or connecting hardware to this system.

38. On Traveling Bridge Anchor Track Systems, always position the bridge(s) directly overhead of worker(s) at all times.

39. If a boom is provided, never apply a lateral load at the boom tip.

40. Never deviate from the above unless you have written permission and authorization from Rigid Lifelines.
Follow the Inspection Checklists in this manual: review the first checklist before each use and the second checklist for after a fall event and annual inspections.

WORKER MUST REMAIN DIRECTLY UNDER THE BRIDGE. NO OFF-PLUMB (OFF-CENTER) LOADING IS ALLOWED.

SYSTEM APPLICATIONS
The Traveling Bridge Anchor Track™ System is used for fall protection applications. This fall protection system is labeled with maximum number of users and maximum arresting force; follow all limitations as noted on system labels. Each user must attach to the Traveling Bridge track using a personal fall arrest system.

STANDARDS AND COMPLIANCE
Please refer to local, state, and federal (OSHA) requirements governing occupational safety for additional information regarding personal fall arrest systems. The Traveling Bridge Anchor Track System meets or exceeds the requirements set forth in OSHA 1910, OSHA 1926, and ANSI Z359.

REQUIRED TRAINING
The Traveling Bridge Anchor Track System is intended to be used by people who are trained in its correct application and use. It is the responsibility of the users and the users’ management to assure that they are familiar with these instructions and are trained in the correct use and care of this equipment. Authorized users must also be aware of the operating characteristics, application limits, and the consequences of improper use, which can result in serious injury or death.

Follow ANSI Z359.2 for instructions on how to set up a proper Fall Protection Program within your facility. ANSI Z359.2 Minimum Requirements for a Comprehensive Managed Fall Protection Program is available at: www.asse.org.
ASSEMBLY INSTRUCTIONS

1. Equipment Needed for Assembly
   a) This manual
   b) Applicable safety equipment for workers’ use during assembly, such as hard hats, safety shoes, etc.
   c) Telescoping fork truck or crane (minimum lifting height: determined by installed system height; minimum capacity: 4,000 pounds)
   d) Man lift/cherry picker (minimum height: determined by installed system height)
   e) Measuring tape
   f) Torque wrench
   g) Lifting straps
   h) Two six-inch by six-inch (or larger) wood blocks
   i) Long carpenter’s level
   j) Wrench/Sockets sizes: 3/4 inch, 15/16 inch, and 1 1/8 inch
   k) A spacious, level area for assembly (e.g., parking lot)
   l) A way to mark hanger locations, such as a permanent marker
   m) FA-CMT-ASSEMBLY SHEET 1 OF 2, hereafter referred to as Traveling Bridge Assembly Drawing, will be included as a separate document.
   n) FA-CMT-ASSEMBLY SHEET 2 OF 2, hereafter referred to as Traveling Bridge Label Placement Drawing, will be included as a separate document.
   o) The Anchor Trolley™ User Instruction Manual (Manual 103-0054), which is packaged with the Anchor Trolley, will be included as a separate document

2. Inventory
   a) Open all bundles and confirm that all components are accounted for: see Building Materials Description located in the top right corner of the Traveling Bridge Assembly Drawing. Note that the quantity of components in an assembly are multiplied by the number of the assemblies.
   b) Check for damage to components that may have occurred during shipping.
REQUIRED BRACING

Refer to Figure 1 for Steps 1 Through 7

NOTE: Flush-mount applications do not require bracing.

1. Sway bracing is required for all Traveling Bridge systems that use drop rods. Sway bracing resists lateral fall arrest forces, reduces lateral stresses on drop rods, and prevents system hardware from loosening and wear due to cyclic loading.

2. Sway bracing is required at each end of the system in both directions (laterally and longitudinally) for each runway.

3. Intermediate bracing is required on one side of each runway at each hanger assembly closest to the track splices (if required).

4. Rigid Lifelines is not liable for design of supporting structures or attachments of system hangers and/or bracing to supporting structures. However, Rigid Lifelines can provide the hangers for the bracing. All supporting structures must be designed by a qualified person using all applicable local, state, and national code requirements.

5. Support structures of structural steel must be designed, fabricated, and/or erected per requirements of “American Institute of Steel Construction” (AISC). Special attention must be given to the requirements for impact and deflection forces to maintain the integrity of the complete building structure and system. The qualified person is liable for the final design.

6. All bracing shown in Figure 1 is to be used as a guide only and should be considered as the minimum requirements for the Traveling Bridge systems that use drop rods. Rigid Lifelines recommends a minimum pipe diameter of one inch for systems with drop rods. Systems with drop rods longer than 12 inches require special design attention by a qualified person.

7. Other bracing materials and designs may be acceptable if they are designed by a qualified person.

NOTE: A qualified person must determine proper brace tube strength before installation.

**Figure 1**

Top View

Side View

End View

Runway bracing is provided by others. Typically, runway bracing is both ways at each end and at one side of each runway at each hanger point.
ATTACHING THE TRACK SPlice TO THE TRACK SECTIONS

Refer to Figure 2 and Figure 3 for Steps 1 Through 9

1. Depending on the existing ceiling structure, span, and track series, track splices are required. If you purchased a system that requires a track splice, follow the steps below to attach the track splice to the track sections. If your system doesn’t require a track splice, proceed to Ceiling-Mounted Plain Track Hanger Options on page 7 or Ceiling-Mounted Trussed Track Hanger Options on page 19.

2. As per Figure 2, the track splice joint (B) comes assembled using a sleeve with a total of eight set screws threaded into the top and both sides.

3. As per Figure 2, slide the track splice joint (B) over the end of the first track section, then butt the second track section against the first. Center the track splice joint (B) over both track section ends.

4. As per Figure 2, hand tighten the top two center set screws to push the track sections against the base of the track splice joint (B) until both track section bottom surfaces are aligned. Adjust both sets of side set screws so that the track slots are aligned and there is a smooth transition from one track section to the other.

5. As per Figure 2, after you properly align the track sections (see Figure 3 on the following page), tighten the top set screws first before tightening the side set screws. Do not over-tighten set screws.

6. As per Figure 2, bolt the track splice plates (B1) to the top of the track sections on both sides using nuts (B3) and bolts (B2). Torque the nuts (B3) to 51 foot-pounds.

**NOTE:** The track splice plates (B1), nuts (B3), and bolts (B2) are only required for trussed track.

---

CEILING-MOUNTED PLAIN TRACK HANGING OPTIONS

1. Flush-Parallel Mount

Refer to Figure 4 for Steps A Through Q

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 4, slide all of the hanger brackets (7) onto the track so that the welded top plate on the hanger bracket (7) is facing up away from the track.

d) As per Figure 4, slide an end hanger bracket (7) onto the marked spot on the track so that the welded top plate on the hanger bracket (7) is facing up away from the track.

e) As per Figure 4, hand tighten the side set screw until snug to align the track against the side of the hanger bracket (7). Do not over tighten the set screw.

NOTE: The hanger bracket (7) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (7) has the set screw threaded into the same side.

f) As per Figure 4, insert bolts (3) through beam clips (2), clipped washers (5), and spacers (6) so that the clipped washers (5) are between the beam clips (2) and spacers (6).

NOTE: Clipped washers (5) may be required depending on the flange thickness. If clipped washers (5) are supplied, ensure that the flat edge of the clipped washers (5) face away from the center of the welded top plate of the hanger bracket (7). Spacers (6) are only required on systems using splices (B in Traveling Bridge Assembly Drawing).

g) As per Figure 4, insert bolts (3) and attached components (2, 5, and 6) through the holes on top of the welded top plate of the hanger bracket (7) so that the beam clips (2), clipped washers (5), and spacers (6) are on top of the welded top plate of the hanger bracket (7).

h) As per Figure 4, hand tighten the nuts (4) to the bolts (3).

i) Repeat steps d) through h) to attach another hanger bracket (7) to the marked spot on the other end of the track (C in Traveling Bridge Assembly Drawing).

j) Using a crane and lifting straps, lift the track (C in Traveling Bridge Assembly Drawing) to the existing ceiling support structure (1 in Figure 4).

k) Use a man lift or cherry picker to reach the track (C in Traveling Bridge Assembly Drawing) and ceiling support structure (1 in Figure 4).

l) As per Figure 4, position the track and attached components (2, 3, 5, and 6) so that the beam clips (2) are on each side of the ceiling support structure (1).

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within one-foot from the center of a ceiling support structure (1 in Figure 4).
m) As per Figure 4, place the beam clips (2) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (2) as needed by tightening or loosening the nuts (4) until the beam clips (2) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (2) to the bottom flange of the ceiling support structure (1).

n) Repeat steps k) through m) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end ceiling support structure (1 in Figure 4).

o) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end ceiling support structures (1 in Figure 4), repeat steps d) through h) and k) through m) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining ceiling support structures (1 in Figure 4).

p) Repeat steps a) through o) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the ceiling support structure.

q) After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all ceiling support structures (1 in Figure 4), ensure that all beam clips (2 in Figure 4) are installed horizontally and level within plus or minus five degrees. Then torque all hanger kit 5/8-inch diameter locknuts (4 in Figure 4) to 108 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

Figure 4

**NOTE:** 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 210 foot-pounds.
2. Flush-Cross Mount

Refer to Figure 5 for Steps A Through Q

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (AA in Traveling Bridge Assembly Drawing) should be installed on the track.

**NOTE:** One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 5, slide all of the hanger brackets (6) onto the track so that the welded top plate on the hanger bracket (6) is facing up away from the track.

d) As per Figure 5, slide an end hanger bracket (6) onto the marked spot on the track so that the welded top plate on the hanger bracket (6) is facing up away from the track.

e) As per Figure 5, hand tighten the side set screw until snug to align the track against the side of the hanger bracket (6). Do not over tighten the set screw.

**NOTE:** The hanger bracket (6) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (6) has the set screw threaded into the same side.

f) As per Figure 5, insert bolts (3) through beam clips (2) and clipped washers (5) so that the beam clips (2) are between the bolt head (3) and the clipped washer (5).

**NOTE:** Clipped washers (5) may be required depending on the flange thickness.

g) As per Figure 5, insert bolts (3) and attached components (2 and 5) through the holes on top of the welded top plate of the hanger bracket (6) so that the beam clips (2) and clipped washers (5) are on top of the welded top plate of the hanger bracket (6).

h) As per Figure 5, hand tighten the locknuts (4) to the bolts (3).

i) Repeat steps d) through h) to attach another hanger bracket (6 in Figure 5) to the marked spot on the other end of the track.

j) Using a crane and lifting straps, lift the track (C in Traveling Bridge Assembly Drawing) to the existing ceiling support structure (1 in Figure 5).

k) Use a man lift or cherry picker to reach the track (C in Traveling Bridge Assembly Drawing) and ceiling support structure (1 in Figure 5).

l) As per Figure 5, position the track and attached components (2, 3, and 5) so that the beam clips (2) are on each side of the ceiling support structure (1).

**NOTE:** Track splice joints (B in Traveling Bridge Assembly Drawing) must be within one-foot from the center of a ceiling support structure (1 in Figure 5).

m) As per Figure 5, place the beam clips (2) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (2) as needed by tightening or loosening the locknuts (4) until the beam clips (2) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (2) to the bottom flange of the ceiling support structure (1).
n) Repeat steps k) through m) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end ceiling support structure (1 in Figure 5).

o) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end ceiling support structures (1 in Figure 5), repeat steps d) through h) and k) through m) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining ceiling support structures (1 in Figure 5).

p) Repeat steps a) through o) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the ceiling support structure (1 in Figure 5).

q) After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all ceiling support structures (1 in Figure 5), ensure that all beam clips (2 in Figure 5) are installed horizontally and level within plus or minus five degrees. Then torque all hanger kit 5/8-inch diameter locknuts (4 in Figure 5) to 108 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

Refer to Figure 6 for Steps A Through Y

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 6, slide all of the hanger brackets (11) onto the track so that the welded top square on the hanger bracket (11) is facing up away from the track.

d) As per Figure 6, slide an end hanger bracket (11) onto the marked spot on the track so that the welded top square on the hanger bracket (11) is facing up away from the track.

e) As per Figure 6, hand tighten the side set screw until snug to align the track against the side of the hanger bracket (11). Do not over tighten the set screw.
NOTE: The hanger bracket (11) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (11) has the set screw threaded into the same side.

f) As per Figure 6, screw a nut (9) onto the bottom of the threaded drop rod (10) and adjust so that about three inches of the drop rod (10) are showing from the bottom of the nut (9).

g) As per Figure 6, slide a lock washer (8) onto the threaded drop rod (10) so that the lock washer (8) is underneath the nut (9).

h) As per Figure 6, insert the bottom of the threaded drop rod (10) into the hole on the welded top square of the hanger bracket (11) until the lock washer (8) is flush against the top of the welded top square of the hanger bracket (11) and the nut (9) is flush against the lock washer (8).

i) As per Figure 6, screw a locknut (2) to the bottom of the threaded drop rod (10) and adjust so that an inch of drop rod (10) is showing underneath the locknut (2).

j) As per Figure 6, screw a nut (9) onto the top of the threaded drop rod (10) so that about three inches of the drop rod (10) are showing from the top of the nut (9).

k) As per Figure 6, slide a lock washer (8) onto the threaded drop rod (10) so that the lock washer (8) is on top of the nut (9).

l) As per Figure 6, insert bolts (3) through beam clips (4) so that the beam clips (4) are underneath the bolt head (3).

m) As per Figure 6, insert bolts (3) and attached beam clips (4) through the bottom side holes in the body forging (5) so that the beam clips (4) are on top of the body forging (5).

n) As per Figure 6, hand tighten locknuts (7) and flat washers (6) to the bolts (3) so that the flat washers (6) are between the body forging (5) and locknuts (7).

o) As per Figure 6, insert the top of the threaded drop rod (10) into the bottom middle hole of the body forging (5) until the lock washer (8) is flush against the bottom of the body forging (5) and the nut (9) is flush against the lock washer (8).

p) As per Figure 6, screw a locknut (2) to the top of the threaded drop rod (10) and adjust so that an inch of drop rod (10) is showing above the locknut (2).

q) Repeat steps d) through p) to attach another hanger bracket (11 in Figure 6) to the marked spot on the other end of the track (C in Traveling Bridge Assembly Drawing).

r) Using a crane and lifting straps, lift the track (C in Traveling Bridge Assembly Drawing) to the existing ceiling support structure (1 in Figure 6).

s) Use a man lift or cherry picker to reach the track (C in Traveling Bridge Assembly Drawing) and ceiling support structure (1 in Figure 6).

t) As per Figure 6, position the track and attached components (2 through 11) so that the beam clips (4) are on each side of the ceiling support structure (1).

NOTE: Track splice joints (8 in Traveling Bridge Assembly Drawing) must be within one-foot from the center of a ceiling support structure (1 in Figure 6).

u) As per Figure 6, place the beam clips (4) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (4) as needed by tightening or loosening the locknuts (7) until the beam clips (4) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (4) to the bottom flange of the ceiling support structure (1).
v) Repeat steps r) through u) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end ceiling support structure (1 in Figure 6).

w) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end ceiling support structures (1 in Figure 6), repeat steps d) through p) and r) through u) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining ceiling support structures (1).

x) Repeat steps a) through o) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the ceiling support structure (1 in Figure 6).

y) After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all ceiling support structures (1), ensure that all beam clips (4 in Figure 6) are installed horizontally and level within plus or minus five degrees. Then torque all hanger kit 5/8-inch diameter locknuts (7 in Figure 6) and drop rod 5/8-inch diameter locknuts (2 in Figure 6) to 108 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

NOTE: Torque all hanger kit and drop rod 5/8-inch diameter locknuts (2 and 7) to 108 foot-pounds.

NOTE: 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 210 foot-pounds.

4. Sloped Drop Rod

Refer to Figure 7 for Steps A Through X

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 7, slide all of the hanger brackets (13) onto the track so that the welded top square on the hanger bracket (13) is facing up away from the track.

d) As per Figure 7, slide an end hanger bracket (13) onto the marked spot on the track so that the welded top square on the hanger bracket (13) is facing up away from the track.
e) As per **Figure 7**, **hand tighten** the side set screw until snug to align the track against the side of the hanger bracket (13). Do not over tighten the set screw.

**NOTE:** The hanger bracket (13) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (13) has the set screw threaded into the same side.

f) As per **Figure 7**, screw a nut (11) onto the bottom of the threaded drop rod (4) and adjust so that about three inches of the drop rod (4) are showing from the bottom of the nut (11).

g) As per **Figure 7**, slide a lock washer (12) onto the threaded drop rod (4) so that the lock washer (12) is underneath the nut (11).

h) As per **Figure 7**, insert the bottom of the threaded drop rod (4) into the hole on the welded top square of the hanger bracket (13) until the lock washer (12) is flush against the top of the welded top square of the hanger bracket (13) and the nut (11) is flush against the lock washer (12).

i) As per **Figure 7**, screw a locknut (9) to the bottom of the threaded drop rod (4) and adjust so that an inch of drop rod (4) is showing underneath the locknut (9).

j) As per **Figure 7**, insert the top of the drop rod (4) through the middle hole on the bottom of the beam clamp channel (2) so that three inches of drop rod (4) are showing.

k) As per **Figure 7**, slide bevel washers (10) and a spherical washer (8) onto the threaded drop rod (4) so that the spherical washer (8) is on top of the bevel washers (10).

**NOTE:** The degree of slope determines how many bevel washers (10) are required.

l) As per **Figure 7**, **hand tighten** a locknut (9) and a hex nut (11) onto the top of the drop rod (4) so that the locknut (9) is between the hex nut (11) and spherical washer (8).

m) As per **Figure 7**, insert bolts (5) through flat washers (7) and the bottom slots in the beam clamp channel (2) so that the flat washers (7) are between the bolt heads (5) and the bottom of the beam clamp channel (2) and the bolt heads (5) are on the bottom of the beam clamp channel (2).

n) As per **Figure 7**, slide beam clamp clips (3) onto the bolts (5) and **hand tighten** locknuts (6) to the bolts (5).

**NOTE:** Ensure that the beam clamp clip wedges are facing away from the center of the beam clamp channel (2).

o) Repeat steps d) through n) to attach another hanger bracket (13 in **Figure 7**) to the marked spot on the other end of the track (C in **Traveling Bridge Assembly Drawing**).

p) Using a crane and lifting straps, lift the track (C in **Traveling Bridge Assembly Drawing**) to the existing ceiling support structure (1 in **Figure 7**).

q) Use a man lift or cherry picker to reach the track (C in **Traveling Bridge Assembly Drawing**) and ceiling support structure (1 in **Figure 7**).

r) As per **Figure 7**, position the track and attached components (2 through 13) so that the beam clamp clips (3) are on each side of the ceiling support structure (1).

**NOTE:** Track splice joints (B in **Traveling Bridge Assembly Drawing**) must be within one-foot from the center of a ceiling support structure (1 in **Figure 7**).
s) As per Figure 7, place the beam clamp clips (3) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clamp clips (3) as needed by tightening or loosening the locknuts (6) until the beam clamp clips (3) sit properly on the bottom flange of the ceiling support structure (1) and in the cutouts of beam clamp channel (2) and are an equal number of cutouts away from the center of the beam clamp channel (2). Ensure that the bolts (5) are as close as possible to the edge of bottom flange of the ceiling support structure (1).

t) As per Figure 7, securely snug the locknuts (6) so that the beam clamp clips (3) are tight to the bottom flange of the ceiling support structure (1).

u) Repeat steps q) through t) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end ceiling support structure (1 in Figure 7).

v) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to end ceiling support structures (1 in Figure 7), repeat steps d) through n) and q) through t) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining ceiling support structures (1 in Figure 7).

w) Repeat steps a) through v) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the ceiling support structure (1 in Figure 7).

x) After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all ceiling support structures (1 in Figure 7), ensure that all beam clamp clips (3 in Figure 7) are installed horizontally and level within plus or minus five degrees. Then torque the top drop rod 5/8-inch diameter nuts (11 in Figure 7) to 112 foot-pounds and all beam clamp and bottom drop rod 5/8-inch diameter locknuts (6 and 9 in Figure 7) to 108 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

Figure 7

NOTE: 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 210 foot-pounds.
5. Flush-Cross Bar Joist

Refer to Figure 8 for Steps A Through P

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACKSECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 8, slide all of the hanger brackets (3) onto the track so that the welded top plate on the hanger bracket (3) is facing up away from the track.

d) As per Figure 8, slide an end hanger bracket (3) onto the marked spot on the track so that the welded top square on the hanger bracket (3) is facing up away from the track.

e) As per Figure 8, hand tighten the side set screw until snug to align the track against the side of the hanger bracket (3). Do not over tighten the set screw.

NOTE: The hanger bracket (3) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (3) has the set screw threaded into the same side.

f) Repeat steps d) and e) to attach another hanger bracket (3 in Figure 8) to the marked spot on the other end of the track (C in Traveling Bridge Assembly Drawing).

g) Using a crane and lifting straps, lift the track (C in Traveling Bridge Assembly Drawing) to the existing ceiling support structure (1 in Figure 8).

h) Use a man lift or cherry picker to reach the track (C in Traveling Bridge Assembly Drawing) and ceiling support structure (1 in Figure 8).

i) As per Figure 8, position the track and attached hanger brackets (3) so that the hanger brackets (3) are directly underneath the ceiling support structure (1).

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within one-foot from the center of a ceiling support structure (1 in Figure 8).

j) As per Figure 8, insert bolts (4) through bolt pads (2).

k) As per Figure 8, insert the bolts (4) and attached bolt pads (2) through the bottom bar joist and holes on the welded top plate of the hanger bracket (3) so that the bolt head (4) and bolt pads (2) are on top of the bottom bar joint.

l) As per Figure 8, securely snug locknuts (5) to the bolts (4).

m) Repeat steps h) through l) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end ceiling support structure (1 in Figure 8).

n) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end ceiling support structures (1 in Figure 8), repeat steps d) and e) and h) through l) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining ceiling support structures (1 in Figure 8).
Repeat steps a) through n) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the ceiling support structure (1 in Figure 8).

After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all ceiling support structures (1 in Figure 8), torque all hanger kit locknuts (5 in Figure 8) to 93 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

6. Wood Joist

Refer to Figure 9 for Steps A Through AE

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 9, slide all of the hanger brackets (10) onto the track so that the welded top square on the hanger bracket (10) is facing up away from the track.

d) As per Figure 9, slide an end hanger bracket (10) onto the marked spot on the track so that the welded top square on the hanger bracket (10) is facing up away from the track.
e) As per **Figure 9**, hand tighten the side set screw until snug to align the track against the side of the hanger bracket (10). Do not over tighten the set screw.

**NOTE:** The hanger bracket (10) comes with a set screw threaded into the side. It doesn’t matter which side. However, ensure that each hanger bracket (10) has the set screw threaded into the same side.

f) As per **Figure 9**, screw a nut (8) onto the bottom of the threaded drop rod (9) and adjust so that about three inches of the drop rod (9) are showing from the bottom of the nut (8).

g) As per **Figure 9**, slide a lock washer (7) onto the threaded drop rod (9) so that the lock washer (7) is underneath the nut (8).

h) As per **Figure 9**, insert the bottom of the threaded drop rod (9) into the hole on the welded top square of the hanger bracket (10) until the lock washer (7) is flush against the top of the welded top square of the hanger bracket (10) and the nut (8) is flush against the lock washer (7).

i) As per **Figure 9**, screw a locknut (4) to the bottom of the threaded drop rod (9) and adjust so that an inch of drop rod (9) is showing underneath the locknut (4).

j) As per **Figure 9**, screw a nut (8) onto the top of the threaded drop rod (9) and adjust so that about three inches of the drop rod (9) are showing from the top of the nut (8).

k) As per **Figure 9**, slide a lock washer (7) onto the threaded drop rod (10) so that the lock washer (7) is on top of the nut (8).

l) Repeat steps d) through k) to attach another hanger bracket (10 in **Figure 9**) to the marked spot on the other end of the track (C in **Traveling Bridge Assembly Drawing**).

m) Measure the distance between the hole centers on the wood bracket plate (2 in **Figure 9**).

n) Using a permanent marker, mark the hole center locations on the wood structure using the measurements from step m).

o) Drill four holes into the wood structures for each hanger assembly.

p) As per **Figure 9**, slide the top of the drop rod (9) through the bottom hole closest to the center of the wood bracket L plate (1) so that the lock washer (7) is flush against the bottom of the wood bracket L plate (1).

q) As per **Figure 9**, screw a locknut (4) to the top of the drop rod (9).

r) As per **Figure 9**, align the bottom hole of the wood bracket plate (2) with the bottom slot of the wood bracket L plate (1).

s) As per **Figure 9**, insert a bolt (5) through the aligned holes in the wood bracket plates (1 and 2).

t) As per **Figure 9**, hand tighten a flat washer (6) and a locknut (4) to the bolt (5) so that the flat washer (6) is between the bottom of the wood bracket L plate (1) and the locknut (4).

u) Repeat steps p) through t) to attach the remaining wood bracket plates (1 and 2 in **Figure 9**) to the top of the drop rods (9 in **Figure 9**).

v) Using a crane and lifting straps, lift the track (C in **Traveling Bridge Assembly Drawing**) to the existing wood structure.

w) Use a man lift or cherry picker to reach the track (C in **Traveling Bridge Assembly Drawing**) and wood structure.
x) As per Figure 9, position the track and attached components (1 through 10) so that the wood bracket plates (1 and 2) are on either side of the wood structure.

**NOTE:** Track splice joints (B in Traveling Bridge Assembly Drawing) must be within one-foot from the center of where the wood bracket plates (1 and 2 in Figure 9) connect to the wood structure.

y) As per Figure 9, align the holes in the wood bracket plates (1 and 2) with the drilled holes in the wood structure.

z) As per Figure 9, insert bolts (3) through the aligned holes in the wood bracket plates (1 and 2) and the wood structure.

aa) As per Figure 9, securely snug locknuts (4) to the bolts (3).

ab) Repeat steps v) through aa) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end wood structure.

ac) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end wood structures, repeat steps d) through k), p) through t), and v) through aa) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining wood structures.

ad) Repeat steps a) through ac) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the wood structure.

ae) After all track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all wood structures, torque all drop rod 5/8-inch diameter locknuts (4 in Figure 9) to 93 foot-pounds.

**NOTE:** Go to pages 33-36 for bridge and end truck installation instructions.

**NOTE:** 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 151 foot-pounds.
CEILING-MOUNTED TRUSSED TRACK HANGING OPTIONS

1. Flush-Parallel Mount

Refer to Figure 10 for Steps A Through Q

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (9 in Figure 10) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track (9 in Figure 10).

NOTE: One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 10, insert four bolts (2) through four beam clips (3) and clipped washers (4) so that the clipped washers (4) are underneath the beam clips (3).

d) As per Figure 10, insert the bolts (2), beam clips (3), and clipped washers (4) through the truss clamp plate (5) so that the components (2, 3, and 4) are on top of the truss clamp plate (5).

NOTE: Clipped washers (4) may be required depending on the flange thickness. If clipped washers (4) are supplied, ensure that the flat edge of the clipped washers (4) face away from the center of the truss clamp plate (5).

e) As per Figure 10, place the end of the truss clamp plate (5) and attached hardware (2, 3, and 4) on the marked spot on the end of the track (9) so that the bolts (2) hang down on both sides of the track (9). Ensure that the end of the truss clamp plate (5) is one-foot six-inches in from each end of the track (9) for standard overhang.

f) As per Figure 10, place the hanger weldment (6) under the top truss of the track (9) so that the hanger weldment tubes are on both sides of the track (9) and resting underneath the truss clamp plate (5).

g) As per Figure 10, insert the bolts (2) and attached components (3 and 4) through the holes on the hanger weldment (6).

h) As per Figure 10, hand tighten flat washers (7) and locknuts (8) to the bolts (2) so that the flat washers (7) are between the bottom of the hanger weldment (6) and locknuts (8).

i) Repeat steps c) through h) to attach another hanger kit (2 through 8 in Figure 10) to the marked spot on the other end of the track (9 in Figure 10).

j) Using a crane and lifting straps, lift the track (9 in Figure 10) to the existing ceiling support structure (1 in Figure 10).

k) Use a man lift or cherry picker to reach the track (9 in Figure 10) and ceiling support structure (1 in Figure 10).

l) As per Figure 10, position the track (9) and attached components (2 through 8) so that the beam clips (3) are on each side of the ceiling support structure (1). Some loosening of the locknuts (8) may be required.

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within four feet from the center of a ceiling support structure (1 in Figure 10).
m) As per **Figure 10**, place the beam clips (3) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (3) as needed by tightening or loosening the locknuts (8) until the beam clips (3) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (3) to the bottom flange of the ceiling support structure (1).

n) Repeat steps k) through m) to attach the track (9 in **Figure 10**) to the other end ceiling support structure (1 in **Figure 10**).

o) Now that the track (9 in **Figure 10**) is attached to the end ceiling support structures (1 in **Figure 10**), repeat steps c) through h) and k) through m) to attach the track (9 in **Figure 10**) to the remaining ceiling support structures (1 in **Figure 10**).

p) Repeat steps a) through o) to attach the remaining tracks (9 in **Figure 10**) to the ceiling support structure (1 in **Figure 10**).

q) After all track (9 in **Figure 10**) has been securely snugged to all ceiling support structures (1 in **Figure 10**), ensure that all beam clips (3 in **Figure 10**) are installed horizontally and level within plus or minus five degrees. Then torque all hanger kit nuts (8 in **Figure 10**) to 108 foot-pounds.

**NOTE:** Go to pages 33-36 for bridge and end truck installation instructions.
2. Flush-Cross Mount

Refer to Figure 11 for Steps A Through O

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (9 in Figure 11) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Ceiling-Mounted Monorail Assembly Drawing) should be installed on the track (9 in Figure 11).

NOTE: One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 11, insert four bolts (2) through four beam clips (3) and clipped washers (4) so that the clipped washers (4) are underneath the beam clips (3).

d) As per Figure 11, insert the bolts (2), beam clips (3), and clipped washers (4) through the truss clamp plate (5) so that the components (2, 3, and 4) are on top of the truss clamp plate (5).

NOTE: Clipped washers (4) may be required depending on the flange thickness. If clipped washers (4) are supplied, ensure that the flat edge of the clipped washers (4) face away from the center of the truss clamp plate (5).

e) As per Figure 11, place the end of the truss clamp plate (5) and attached hardware (2, 3, and 4) on the marked spot on the end of the track (9) so that the bolts (2) hang down on both sides of the track (9). Ensure that the end of the truss clamp plate (5) is one-foot six-inches in from each end of the track (9) for standard overhang.

f) As per Figure 11, hand tighten the angle truss clamps (8) to the bolts (2) using flat washers (6) and locknuts (7) so that the flat washers (6) are between the angle truss clamps (8) and locknuts (7). Ensure that the angle truss clamps (8) form inverted-L’s.

g) Repeat steps c) through f) to attach another hanger kit (2 through 8 in Figure 11) to the marked spot on the other end of the track (9 in Figure 11).

h) Using a crane and lifting straps, lift the track (9 in Figure 11) to the existing ceiling support structure (1 in Figure 11).

i) Use a man lift or cherry picker to reach the track (9 in Figure 11) and ceiling support structure (1 in Figure 11).

j) As per Figure 11, position the track (9) and attached components (2 through 8) so that the beam clips (3) are on each side of the ceiling support structure (1).

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within four feet from the center of a ceiling support structure (1 in Figure 11).

k) As per Figure 11, place the beam clips (3) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (3) as needed by tightening or loosening the locknuts (7) until the beam clips (3) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (3) to the bottom flange of the ceiling support structure (1).

l) Repeat steps i) through k) to attach the track (9 in Figure 11) to the other end ceiling support structure (1 in Figure 11).
m) Now that the track (9 in Figure 11) is attached to the end ceiling support structures (1 in Figure 11), repeat steps c) through f) and i) through k) to attach the track (9 in Figure 11) to the remaining ceiling support structures (1 in Figure 11).

n) Repeat steps a) through m) to attach the remaining tracks (9 in Figure 11) to the ceiling support structure (1 in Figure 11).

o) After the track (9 in Figure 11) has been securely snugged to all ceiling support structures (1 in Figure 11), ensure that all beam clips (3 in Figure 11) are installed horizontally and level within plus or minus five degrees. Then torque all hanger kit 5/8-inch diameter locknuts (7 in Figure 11) to 108 foot-pounds.

**NOTE:** Go to pages 33-36 for bridge and end truck installation instructions.

**NOTE:** Torque all hanger kit 5/8-inch diameter locknuts (7) to 108 foot-pounds.

**NOTE:** 700 Series track uses 3/4-inch hardware. Torque 3/4-inch hardware to 210 foot-pounds.

3. Drop Rod

**Refer to Figure 12 for Steps A Through Y**

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (15 in Figure 12) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track (15 in Figure 12).

**NOTE:** One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 12, insert two bolts (11) through two flat washers (12) and the bottom slots of the hanger truss bracket (10) so that the flat washers (12) are between the bolt heads and the bottom of the hanger truss bracket (10).

d) As per Figure 12, place the hanger truss bracket (10) on the marked spot on the end of the track (15) so that the bolts (11) hang down on both sides of the track (15). Ensure that the end of the hanger truss bracket (10) is one-foot six-inches from the end of the track (15) for standard overhang.
e) As per Figure 12, hand tighten the angle truss clamps (14) to the bolts (11) using flat washers (12) and locknuts (13) so that the flat washers (12) are between the angle truss clamps (14) and locknuts (13). Ensure that the angle truss clamps (14) form inverted-L's.

f) As per Figure 12, screw a nut (8) onto the bottom of the threaded drop rod (9) and adjust so that about three inches of the drop rod (9) are showing from the bottom of the nut (8).

g) As per Figure 12, slide a lock washer (7) onto the threaded drop rod (9) so that the lock washer (7) is underneath the nut (8).

h) As per Figure 12, insert the bottom of the threaded drop rod (9) into the top hole of the hanger truss bracket (10) until the lock washer (7) is flush against the top of the hanger truss bracket (10) and the nut (8) is flush against the lock washer (7).

i) As per Figure 12, screw a locknut (6) to the bottom of the threaded drop rod (9) and adjust so that an inch of drop rod (9) is showing underneath the locknut (6).

j) As per Figure 12, screw a nut (8) onto the top of the threaded drop rod (9) and adjust so that about three inches of the drop rod (9) are showing from the top of the nut (8).

k) As per Figure 12, slide a lock washer (7) onto the threaded drop rod (9) so that the lock washer (7) is on top of the nut (8).

l) As per Figure 12, insert two bolts (2) through beam clips (3) so that the beam clips (3) are underneath the bolt head (2).

m) As per Figure 12, insert the bolts (2) and attached beam clips (3) through the bottom side holes in the body forging (4) so that the beam clips (3) are on top of the body forging (4).

n) As per Figure 12, hand tighten locknuts (6) and flat washers (5) to the bolts (2) so that the flat washers (5) are between the body forging (4) and locknuts (6).

o) As per Figure 12, insert the top of the threaded drop rod (9) into the bottom middle hole of the body forging (4) until the lock washer (7) is flush against the bottom of the body forging (4) and the nut (8) is flush against the lock washer (7).

p) As per Figure 12, screw a locknut (6) to the top of the threaded drop rod (9) and adjust so that an inch of drop rod (9) is showing above the locknut (6).

q) Repeat steps c) through p) to attach another hanger kit (2 through 14 in Figure 12) to the marked spot on the other end of the track (15 in Figure 12).

r) Using a crane and lifting straps, lift the track (15 in Figure 12) to the existing ceiling support structure (1 in Figure 12).

s) Use a man lift or cherry picker to reach the track (15 in Figure 12) and ceiling support structure (1 in Figure 12).

t) As per Figure 12, position the track (15) and attached components (2 through 14) so that the beam clips (3) are on each side of the ceiling support structure (1).

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within four feet from the center of a ceiling support structure (1).

u) As per Figure 12, place the beam clips (3) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clips (3) as needed by tightening or loosening the locknuts (6) until the beam clips (3) sit properly on the bottom flange of the ceiling support structure (1). Securely snug the beam clips (3) to the bottom flange of the ceiling support structure (1).
v) Repeat steps \( r \) through \( u \) to attach the track (15 in Figure 12) to the other end ceiling support structure (1 in Figure 12).

w) Now that the track (15 in Figure 12) is attached to the end ceiling support structures (1), repeat steps \( c \) through \( p \) and \( r \) through \( u \) to attach the track (15 in Figure 12) to the remaining ceiling support structures (1 in Figure 12).

x) Repeat steps \( a \) through \( w \) to attach the remaining tracks (15 in Figure 12) to the ceiling support structure (1 in Figure 12).

y) After the track (15 in Figure 12) has been securely snugged to all ceiling support structures (1 in Figure 12), ensure that all beam clips (3 in Figure 12) are installed horizontally and level within plus or minus five degrees. Then torque all 5/8-inch locknuts (6 in Figure 12) to 108 foot-pounds and all 1/2-inch locknuts (13 in Figure 12) to 51 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

### Figure 12

**NOTE:** Torque all hanger kit 5/8-inch diameter locknuts (6) to 108 foot-pounds.

- **Item** | **Description**
- 1 | Ceiling Support Structure
- 2 | 5/8-inch Hex Bolt
- 3 | 5/8-inch Beam Clip
- 4 | Body Forging
- 5 | 5/8-inch Flat Washer
- 6 | 5/8-inch Hex Locknut
- 7 | 5/8-inch Lock Washer
- 8 | 5/8-inch Hex Nut
- 9 | Drop Rod
- 10 | Hanger Truss Bracket
- 11 | 1/2-inch Hex Bolt
- 12 | 1/2-inch Flat Washer
- 13 | 1/2-inch Hex Locknut
- 14 | Angle Truss Clamp
- 15 | Track

#### 4. Sloped Drop Rod

Refer to Figure 13 for Steps A Through X

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (18 in Figure 13) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track (18 in Figure 13).

NOTE: One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.
c) As per Figure 13, insert two bolts (14) through two flat washers (16) and the bottom slots of the hanger truss bracket (13) so that the flat washers (16) are between the bolt heads and the bottom of the hanger truss bracket (13).

d) As per Figure 13, place the hanger truss bracket (13) on the marked spot on the end of the track (18) so that the bolts (14) hang down on both sides of the track (18). Ensure that the end of the hanger truss bracket (13) is one-foot six-inches from the end of the track (18) for standard overhang.

e) As per Figure 13, hand tighten the angle truss clamps (15) to the bolts (14) using flat washers (16) and locknuts (17) so that the flat washers (16) are between the angle truss clamps (15) and locknuts (17). Ensure that the angle truss clamps (15) form inverted-L's.

f) As per Figure 13, screw a nut (11) onto the bottom of the threaded drop rod (4) and adjust so that about three inches of the drop rod (4) are showing from the bottom of the nut (11).

g) As per Figure 13, slide a lock washer (12) onto the threaded drop rod (4) so that the lock washer (12) is underneath the nut (11).

h) As per Figure 13, insert the bottom of the threaded drop rod (4) into the top hole of the hanger truss bracket (13) until the lock washer (12) is flush against the top of the hanger truss bracket (13) and the nut (11) is flush against the lock washer (12).

i) As per Figure 13, screw a locknut (9) to the bottom of the threaded drop rod (4) and adjust so that an inch of drop rod (4) is showing underneath the locknut (9).

j) As per Figure 13, insert the top of the drop rod (4) through the middle hole on the bottom of the beam clamp channel (2) so that three inches of drop rod (4) are showing.

k) As per Figure 13, slide bevel washers (10) and a spherical washer (8) onto the threaded drop rod (4) so that the spherical washer (8) is on top of the bevel washers (10).

NOTE: The degree of slope determines how many bevel washers (10) are required.

l) As per Figure 13, hand tighten a locknut (9) and a hex nut (11) onto the top of the drop rod (4) so that the locknut (9) is between the hex nut (11) and spherical washer (8).

m) As per Figure 13, insert bolts (5) through flat washers (7) and the bottom side holes in the beam clamp channel (2) so that the flat washers (7) are between the bolt heads (5) and the bottom of the beam clamp channel (2) and the bolt heads (5) are on the bottom of the beam clamp channel (2).

n) As per Figure 13, slide beam clamp clips (3) onto the bolts (5) and hand tighten locknuts (6) to the bolts (5).

NOTE: Ensure that the beam clamp clip wedges are facing away from the center of the beam clamp channel (2).

o) Repeat steps c) through n) to attach another hanger truss bracket (13 in Figure 13) to the marked spot on the other end of the track (18 in Figure 13).

p) Using a crane and lifting straps, lift the track (18 in Figure 13) to the existing ceiling support structure (1 in Figure 13).

q) Use a man lift or cherry picker to reach the track (18 in Figure 13) and ceiling support structure (1 in Figure 13).

r) As per Figure 13, position the track (18) and attached components (2 through 17) so that the beam clamp clips (3) are on each side of the ceiling support structure (1).

NOTE: Track splice joints (8 in Traveling Bridge Assembly Drawing) must be within four feet from the center of a ceiling support structure (1 in Figure 13).
s) As per Figure 13, place the beam clamp clips (3) so they are holding onto the bottom flange of the ceiling support structure (1). Adjust the beam clamp clips (3) as needed by tightening or loosening the locknuts (6) until the beam clamp clips (3) sit properly on the bottom flange of the ceiling support structure (1) and in the cutouts of beam clamp channel (2) and are an equal number of cutouts away from the center of the beam clamp channel (2). Ensure that the bolts (5) are as close as possible to the edge of bottom flange of the ceiling support structure (1).

t) As per Figure 13, securely snug the locknuts (6) so that the beam clamp clips (3) are tight to the bottom flange of the ceiling support structure (1).

u) Repeat steps q) through t) to attach the track (18 in Figure 13) to the other end ceiling support structure (1 in Figure 13).

v) Now that the track (18 in Figure 13) is attached to end ceiling support structures (1 in Figure 13), repeat steps c) through n) and q) through t) to attach the track (18 in Figure 13) to the remaining ceiling support structures (1 in Figure 13).

w) Repeat steps a) through w) to attach the remaining tracks (18 in Figure 13) to the ceiling support structure (1 in Figure 13).

x) After all track (18 in Figure 13) has been securely snugged to all ceiling support structures (1 in Figure 13), ensure that all beam clamp clips (3 in Figure 13) are installed horizontally and level within plus or minus five degrees. Then torque the top drop rod 5/8-inch diameter nuts (11 in Figure 13) to 112 foot-pounds, beam clamp and bottom drop rod 5/8-inch diameter locknuts (6 and 9 in Figure 13) to 108 foot-pounds, and all hanger kit 1/2-inch diameter locknuts (17 in Figure 13) to 51 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

Figure 13

NOTE: 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 210 foot-pounds.

NOTE: Torque all beam clamp and bottom drop rod 5/8-inch diameter locknuts (6 and 9) to 108 foot-pounds.

5. **Drop Rod Bar Joist**

Refer to Figure 14 for Steps A Through W

a) Ensure that track splices (B in *Traveling Bridge Assembly Drawing*), if supplied, have been installed as per **ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS** on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (12 in *Figure 14*) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in *Traveling Bridge Assembly Drawing*) should be installed on the track (12 in *Figure 14*).

**NOTE:** One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per **Figure 14**, insert two bolts (8) through two flat washers (10) and the bottom slots of the hanger truss bracket (7) so that the flat washers (10) are between the bolt heads and the bottom of the hanger truss bracket (7).

d) As per **Figure 14**, place the hanger truss bracket (7) on the marked spot on the end of the track (12) so that the bolts (8) hang down on both sides of the track (12). Ensure that the end of the hanger truss bracket (7) is one-foot six-inches from the end of the track (12) for standard overhang.

e) As per **Figure 14**, hand tighten the angle truss clamps (9) to the bolts (8) using flat washers (10) and locknuts (11) so that the flat washers (10) are between the angle truss clamps (9) and locknuts (11). Ensure that the angle truss clamps (9) form *inverted-L’s*.

f) As per **Figure 14**, screw a nut (6) onto the bottom of the threaded drop rod (2) and adjust so that about three inches of the drop rod (2) are showing from the bottom of the nut (6).

g) As per **Figure 14**, slide a lock washer (5) onto the threaded drop rod (2) so that the lock washer (5) is underneath the nut (6).

h) As per **Figure 14**, insert the bottom of the threaded drop rod (2) into the top hole of the hanger truss bracket (7) until the lock washer (5) is flush against the top of the hanger truss bracket (7) and the nut (6) is flush against the lock washer (5).

i) As per **Figure 14**, screw a locknut (3) to the bottom of the threaded drop rod (2) and adjust so that an inch of drop rod (2) is showing underneath the locknut (3).

j) As per **Figure 14**, screw a nut (6) onto the top of the threaded drop rod (2) and adjust so that about three inches of the drop rod (2) are showing from the top of the nut (6).

k) As per **Figure 14**, slide a lock washer (5) onto the threaded drop rod (2) so that the lock washer (5) is on top of the nut (6).

l) As per **Figure 14**, slide a bolt pad (4) onto the threaded drop rod (2) so that the bolt pad (4) is on top of the lock washer (5).

m) Repeat steps c) through l) to attach another hanger truss bracket (7 in *Figure 14*) to the marked spot on the other end of the track (12 in *Figure 14*).

n) Using a crane and lifting straps, lift the track (12 in *Figure 14*) to the existing ceiling support structure (1 in *Figure 14*).

o) Use a man lift or cherry picker to reach the track (12 in *Figure 14*) and ceiling support structure (1 in *Figure 14*).

p) As per **Figure 14**, position the track (12) and attached hanger truss brackets (7) so that the hanger truss brackets (7) are directly underneath the ceiling support structure (1).
NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within four feet from the center of a ceiling support structure (1 in Figure 14).

q) As per Figure 14, insert the top of the drop rod (2) through the bottom of the ceiling support structure (1) so that the attached components (4, 5, and 6) are underneath the ceiling support structure (1).

r) As per Figure 14, slide another bolt pad (4) onto the top of the threaded drop rod (2) and adjust so that about an inch of drop rod (2) is showing from the top of the bolt pad (4).

s) As per Figure 14, screw a locknut (3) to the top of the threaded drop rod (2) and adjust so that the bolt pad (4) is underneath the locknut (3).

t) Repeat steps o) through s) to attach the track (12 in Figure 14) to the other end ceiling support structure (1 in Figure 14).

u) Now that the track (12 in Figure 14) is attached to the end ceiling support structures (1 in Figure 14), repeat steps c) through l) and o) through s) to attach the track (12 in Figure 14) to the remaining ceiling support structures (1 in Figure 14).

v) Repeat steps a) through u) to attach the remaining tracks (12 in Figure 14) to the ceiling support structure (1 in Figure 14).

w) After the track (12 in Figure 14) has been securely snugged to all ceiling support structures (1 in Figure 14), torque all 5/8-inch locknuts (3 in Figure 14) to 93 foot-pounds and all 1/2-inch locknuts (11 in Figure 14) to 51 foot-pounds.

NOTE: Drop rod bar joint hanger assemblies can be used with plain track and plain track hanger kits. Refer to “3. Drop Rod” on pages 10-12 to attach the plain track and plain track hanger kits to the drop rod bar joint hanger assemblies.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.

NOTE: 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 151 foot-pounds.
6. Wood Joist

Refer to Figure 15 for Steps A Through AE

a) Ensure that track splices (B in Traveling Bridge Assembly Drawing), if supplied, have been installed as per ATTACHING THE TRACK SPLICE TO THE TRACK SECTIONS on page 5.

b) Using a measuring tape and a permanent marker, measure and mark one-foot six-inches in from each end of the track (C in Traveling Bridge Assembly Drawing) for standard overhang. Also measure and mark your support spacing requirements. These locations are where the hanger kits (A in Traveling Bridge Assembly Drawing) should be installed on the track.

NOTE: One-foot six-inch overhang is standard. Refer to your Final Fabrication Drawing for correct overhang lengths and support spacing for your specific system.

c) As per Figure 15, insert two bolts (11) through two flat washers (13) and the bottom slots of the hanger truss bracket (10) so that the flat washers (13) are between the bolt heads and the bottom of the hanger truss bracket (10).

d) As per Figure 15, place the hanger truss bracket (10) on the marked spot on the end of the track so that the bolts (11) hang down on both sides of the track. Ensure that the end of the hanger truss bracket (10) is one-foot six-inches from the end of the track for standard overhang.

e) As per Figure 15, hand tighten the angle truss clamps (12) to the bolts (11) using flat washers (13) and locknuts (14) so that the flat washers (13) are between the angle truss clamps (12) and locknuts (14). Ensure that the angle truss clamps (12) form inverted-L's.

f) As per Figure 15, screw a nut (8) onto the bottom of the threaded drop rod (9) so that about three inches of the drop rod (9) are showing from the bottom of the nut (8).

h) As per Figure 15, insert the bottom of the threaded drop rod (9) into the top hole of the hanger truss bracket (10) until the lock washer (7) is flush against the top of the hanger truss bracket (10) and the nut (8) is flush against the lock washer (7).

i) As per Figure 15, screw a locknut (4) to the bottom of the threaded drop rod (9) and adjust so that an inch of drop rod (9) is showing underneath the locknut (4).

j) As per Figure 15, screw a nut (8) onto the top of the threaded drop rod (9) and adjust so that about three inches of the drop rod (9) are showing from the top of the nut (6).

k) As per Figure 15, slide a lock washer (7) onto the threaded drop rod (9) so that the lock washer (7) is on top of the nut (8).

l) Repeat steps c) through k) to attach another hanger truss bracket (10 in Figure 15) to the marked spot on the other end of the track (C in Traveling Bridge Assembly Drawing).

m) Measure the distance between the hole centers on the wood bracket plate (2 in Figure 15).

n) Using a permanent marker, mark the hole center locations on the wood structure using the measurements from step m).

o) Drill four holes into the wood structures for each hanger assembly.
p) As per Figure 15, slide the top of the drop rod (9) through the bottom hole closest to the center of the wood bracket L plate (1) so that the lock washer (7) is flush against the bottom of the wood bracket L plate (1).

q) As per Figure 15, screw a locknut (4) to the top of the drop rod (9).

r) As per Figure 15, align the bottom hole of the wood bracket plate (2) with the bottom side hole of the wood bracket L plate (1).

s) As per Figure 15, insert a bolt (5) through the aligned holes in the wood bracket plates (1 and 2).

t) As per Figure 15, hand tighten a flat washer (6) and a locknut (4) to the bolt (5) so that the flat washer (6) is between the bottom of the wood bracket L plate (1) and the locknut (4).

u) Repeat steps p) through t) to attach the remaining wood bracket plates (1 and 2 in Figure 15) to the top of the drop rods (9 in Figure 15).

v) Using a crane and lifting straps, lift the track (C in Traveling Bridge Assembly Drawing) to the existing wood structure.

w) Use a man lift or cherry picker to reach the track (C in Traveling Bridge Assembly Drawing) and wood structure.

x) As per Figure 15, position the track and attached components (1 through 11) so that the wood bracket plates (1 and 2) are on either side of the wood structure.

NOTE: Track splice joints (B in Traveling Bridge Assembly Drawing) must be within four feet from the center of where the wood bracket plates (1 and 2 in Figure 15) connect to the wood structure.

y) As per Figure 15, align the holes in the wood bracket plates (1 and 2) with the drilled holes in the wood structure.

z) As per Figure 15, insert bolts (3) through the aligned holes in the wood bracket plates (1 and 2) and the wood structure.

aa) As per Figure 15, securely snug locknuts (4) to the bolts (3).

ab) Repeat steps w) through aa) to attach the track (C in Traveling Bridge Assembly Drawing) to the other end wood structure.

ac) Now that the track (C in Traveling Bridge Assembly Drawing) is attached to the end wood structures, repeat steps c) through k), p) through t), and w) through aa) to attach the track (C in Traveling Bridge Assembly Drawing) to the remaining wood structures.

ad) Repeat steps a) through ac) to attach the remaining tracks (C in Traveling Bridge Assembly Drawing) to the wood structure.

ae) After the track (C in Traveling Bridge Assembly Drawing) has been securely snugged to all wood structures, torque all 5/8-inch locknuts (4 in Figure 15) to 93 foot-pounds and all 1/2-inch locknuts (14 in Figure 15) to 51 foot-pounds.

NOTE: Go to pages 33-36 for bridge and end truck installation instructions.
Figure 15

Wood Structure

---

**Item** | **Description**
---|---
1 | Wood Bracket L Plate
2 | Wood Bracket Plate
3 | 5/8-inch Hex Bolt
4 | 5/8-inch Hex Locknut
5 | 5/8-inch Hex Bolt
6 | 5/8-inch Flat Washer
7 | 5/8-inch Lock Washer
8 | 5/8-inch Hex Nut
9 | 5/8-inch Drop Rod
10 | Hanger Truss Bracket
11 | 1/2-inch Hex Bolt
12 | Angle Truss Clamp
13 | 1/2-inch Flat Washer
14 | 1/2-inch Hex Locknut

**NOTE:** 700 Series Plain Track uses 3/4-inch hardware. Torque 3/4-inch hardware to 151 foot-pounds.
**FINAL ASSEMBLY**

Refer to Traveling Bridge Assembly Drawing for Steps 1 Through 7

1. Ensure that the track (C in *Building Materials Description*) is secured properly to the ceiling support structure (1 in *Building Materials Description*).

2. Confirm that all of the system’s nuts are torqued to the required specifications below prior to removing support rigging (your telescoping fork truck or crane) from any component.

<td>325 foot-pounds</td>
</tr>
</tbody>
</table>

**NOTE:** The beam clip 5/8-inch nuts (A4 and AA6) should be torqued to 108 foot-pounds and hanger kit 1/2-inch nuts should be torqued to 51 foot-pounds.

3. As per **Detail “C,”** insert your Anchor Trolley™ (C2) into the bridge (D). For a multiple bridge system, install Anchor Trolley(s) as required.

4. As per **Detail “C,”** install the bridge’s end stops by inserting the bolts (C4) through the holes at both ends of the bridge (D) and through the rubber sleeves (C6).

**Detail “C” (Trolley[s] and End Stops to Bridge and End Stops to Tracks)**

5. Attach and torque the end stop nuts (C5) until snug against the bridge.

6. For multiple bridge systems, repeat steps 1. through 5. to insert the remaining Anchor Trolleys (C2) into the remaining bridges (D).

**NOTE:** Repeat steps 4. and 5. to attach end stop kits (C3 in *Building Materials Description*) to each end of each track (C in *Building Materials Description*).

7. **This system must be used with an ANSI-rated self-retracting lanyard (SRL).** Connect your SRL and retrieval tagline in accordance with the manufacturer’s specifications and your training.
ATTACHING STEEL BRIDGE AND END TRUCKS TO THE TRACK

Refer to Figure 16 for Steps 1 Through 9

NOTE: The fixed end truck is secured to the bridge with provided set screws. The free-sliding end truck is allowed to slide freely on the bridge to accommodate for any slight misalignment between the parallel tracks.

1. As per Figure 16, slide the fixed end truck (1) onto one end of the bridge (3) until the end stop bolt holes (4) are visible. Ensure that the end truck wheels are facing up away from the bridge (3).

2. As per Figure 16, hand tighten the two set screws (6) on the fixed end truck (1) so that the fixed end truck (1) cannot move side-to-side. Adjust the two set screws (6) so that the track slots are aligned and there is a smooth transition from the bridge (3) to the fixed end truck (1). Do not over-tighten set screws.

3. As per Figure 16, slide the free-sliding end truck (2) onto the other end of the bridge (3) until the end stop bolt holes (4) are visible. Ensure that the end truck wheels are facing up away from the bridge (3).

4. Using a crane and lifting straps, lift the bridge (3 in Figure 16) and attached end trucks (1 and 2 in Figure 16) to one end of parallel tracks (C in Traveling Bridge Assembly Drawing).

5. Use a man lift or cherry picker to reach the parallel tracks (C in Traveling Bridge Assembly Drawing).

6. As per Figure 16, slide the end truck wheels onto the parallel tracks (C in Traveling Bridge Assembly Drawing), one end truck (1 and 2) per track.

7. As per Figure 16, adjust the set screws (6) on the fixed end truck (1) to provide a minimum clearance of two inches between the ends of the bridge (3) and any side obstructions.

8. As per Figure 16, adjust support brackets or hangers to provide a minimum clearance of three inches between the top of the bridge (3) and any overhead obstructions.

9. Go to page 32 for final assembly instructions.

NOTE: Bridge lengths longer than 23 feet require extended end trucks not shown in Figure 16.

NOTE: Only the fixed end truck (1) requires set screws (6).

ATTACHING ALUMINUM BRIDGE AND END TRUCKS TO THE TRACK

Refer to Figure 17 for Steps 1 Through 26

NOTE: Bridge lengths longer than 23 feet require extended end trucks and extended end truck tie-rod assemblies. For two person systems, bridge lengths longer than 17 feet require a bridge reinforcing spine. The bridge reinforcing spine comes welded to the bridge.

1. As per Figure 17, align the two holes in the extended end truck bracket with two side holes in the bridge (2).

2. As per Figure 17, insert two bolts (3) through four flat washers (4). Ensure that each bolt (3) receives two flat washers (4).

3. As per Figure 17, insert the bolts (3) and attached flat washers (4) through the aligned holes in the extended end truck bracket and bridge (2) so that the flat washers (4) are on the outside of each side of the bridge (2).

NOTE: Ensure that the safety cable goes under the bolts (3). The safety cable ships assembled.

4. As per Figure 17, securely snug flat washers (4) and locknuts (5) to the bolts (3) so that the flat washers (4) are between the bridge (2) and locknuts (5).

5. Repeat steps 1 through 3 to attach another extended end truck (1) to the other side of the bridge (2).

6. As per Figure 17, insert two bolts (6) through two flat washers (7) and a mounting bracket (8) so that the flat washers (7) are between the bolt head and the mounting bracket (8) and the single hole on the mounting bracket (8) is facing down.

7. As per Figure 17, insert the bolts (6) with attached components (7 and 8) through the two holes in the bridge (2).

8. As per Figure 17, slide another mounting bracket (8) onto the bolts (6) so that the single hole in the mounting bracket (8) is facing down.

9. As per Figure 17, securely snug flat washers (7) and locknuts (9) to the bolts (6) so that the flat washers (7) are between the mounting bracket (8) and the locknuts (9).

NOTE: As per Figure 17, start assembling the left extended end truck bracing assembly. Only one extended end truck (1) requires tie-rod assemblies.

10. As per Figure 17, insert the stud of the rod end (10) through the hole on the bottom of the extended end truck (1). Ensure that the rod end (10) is facing the bridge (2).

11. As per Figure 17, securely snug a locknut (11) to the stud of the rod end (10).

12. As per Figure 17, hand tighten the nut with left-handed thread (12) to the end of the tie rod (13) with left-handed thread so that about two inches of the tie-rod (13) extend past the end of the nut (12).

13. As per Figure 17, hand tighten the end of the tie rod (13) with left-handed thread and attached nut with left-handed thread (12) to the rod end (10).

14. As per Figure 17, hand tighten a nut with right-handed thread (14) to the other end of the tie rod (13) with right-handed thread so that about two inches of thread extend past the end of the nut (14).
15. As per Figure 17, **hand tighten** the end of the tie rod (13) with right-handed thread and attached nut (14) to the single hole of the tie-rod clevis (15). Ensure that the two end holes of the tie-rod clevis (15) are vertical.

16. As per Figure 17, align the two vertical holes in the tie-rod clevis (15) with the single middle hole in the mounting bracket (8). The single middle hole in the mounting bracket (8) goes between the vertical holes in the tie-rod clevis (15).

17. As per Figure 17, align four flat washers (7) with the aligned holes in the tie-rod clevis (15) and mounting bracket (8) so that two flat washers (7) are between the bottom of the mounting bracket (8) and top of the lower vertical hole of the tie-rod clevis (15). The other two flat washers (7) go between the top of the mounting bracket (8) and the bottom of the upper vertical hole on the tie-rod clevis (15).

18. As per Figure 17, insert a bolt (16) through the aligned holes in the tie-rod clevis (15), flat washers (7), and mounting bracket (8) so that the bolt head is on top of the upper vertical hole of the clevis (15).

19. As per Figure 17, securely snug a locknut (9) to the bolt (16).

20. As per Figure 17, securely snug all nuts previously **hand tightened** in steps 12 through 15.

21. Repeat steps 10 through 20 to attach the right extended end truck bracing assembly.

22. As per Figure 17, align the two holes in the end cap (18) with the welded aluminum sleeves in the bridge (2).

23. As per Figure 17, insert two bolts (17) through the aligned holes in the end cap (18) and welded sleeves.

24. As per Figure 17, securely snug nuts (19) to the bolts (17).

25. Repeat steps 22 through 24 to attach the remaining end cap (18) to the bridge (2).

26. Go to page 32 for final assembly instructions.
**NOTE:** For 306 aluminum, the bolt (3) is 3/8-inch diameter by 4 inches long with 3/8-inch diameter flat washers (4) and 3/8-inch diameter locknuts (5). For 308 aluminum, the bolt (3) is 1/2-inch diameter by 4 1/2 inches long with 1/2-inch diameter flat washers (4) and 1/2-inch diameter locknuts (5).

**NOTE:** Tie rods and extended end trucks shown are only required for bridges longer than 23 feet.
MAINTENANCE

1. Visually inspect the system before each use and fully inspect the system after a fall event and annually. Refer to the INSPECTION CHECKLISTS in the next section of this manual for checklists for Traveling Bridge Anchor Track™ System and Annual Anchor Track™ System.

2. **If the system fails ANY inspection point on any of the inspection checklists, immediately remove the system from service and call Rigid Lifelines® at 844-467-4443 for instructions.**

3. During the first month after a new installation, a weekly inspection of the system should be performed using the Annual Anchor Track™ System Inspection Checklist. It is important to note that every system application and use will be different, meaning some conditions of use will require more frequent inspection. Examples of such conditions include two or three shift operations or working with or near corrosive chemicals or elements.

4. Refer to the Anchor Trolley™ User Instruction Manual (Manual 103-0054), which comes packaged with the Anchor Trolley, for its trolley inspection checklists.

5. Download and print additional blank inspection checklists from the literature tab at RigidLifelines.com.

---

**WARNING**

This system must be used with an ANSI-rated self-retracting lanyard (SRL).

If the system is used outdoors, it is highly recommended that a steel cable SRL with heavy-duty housing be used for improved durability against UV radiation and moisture.

A web strap ANSI-rated SRL may be acceptable for use as long as a Competent Person has evaluated the situation and determined that there are no factors present that can have an immediate negative impact on the integrity of the SRL’s webbing material AND that the Competent Person inspects the condition of the SRL’s webbing and housing prior to each use.

---

**WARNING**

 Completely retracting the SRL after each use (e.g., using a retrieval tagline) is essential: otherwise, the SRL’s internal spring remains under tension, and it quickly loses its ability to properly arrest a freefall.

Retrieval taglines must never be used as an anchorage; doing so could result in serious injury or death.
LABELING

The letters correspond to the letters on the Traveling Bridge Label Placement Drawing. All labeling must be legible and attached to the system. For replacement labels, contact Rigid Lifelines®.

RIGID LIFELINES’ LABEL PLACEMENT DISCLAIMER

If system is shipped unpainted or without properly secured labels, proper label placement is the sole responsibility of the end user. Follow the Label Placement Drawing shipped with this user manual to place labels correctly. Rigid Lifelines cannot be held liable for any damage or injury resulting from omitted or improper label placement.

“A”

![Label A Diagram]

P/N 53-0047

“B”

![Label B Diagram]

P/N 53-0359

“C”

![Label C Diagram]

P/N 53-0023

Notes on Label Placement Drawing

- Label **53-0047** “A” should be placed on both ends of the lower section of trussed track on both sides of each track section and at each end of the bridge on both sides.

- Label **53-0359** “B” should be centered on the lower section of the bridge on both sides and is **P/N 53-0535** for one person systems, **53-0536** for two person systems, and **53-0359** for **three to eight** person systems, along with **53-0413** through **53-0418** respectively. Labels **P/N 53-0413** through **53-0418** are the capacity numbers three through eight for the Anchor Track Label and should be placed to the right of the line following “Rigid Lifelines.”

- Label **53-0023** “C” should be placed to the left of label “B” on the lower section of the bridge on both sides.
# TRAVELING BRIDGE ANCHOR TRACK™ SYSTEM INSPECTION CHECKLIST

Before Each Use

Inspector Name: ________________________________________________
Date: __________________________________________________________

AFTER A FALL EVENT AND ANNUAL ANCHOR TRACK™ SYSTEM INSPECTION CHECKLIST

Inspector Name: ____________________________________________________
Date: ______________________________________________________________
System Number: ____________________________________________________
Model: _____________________________________________________________

<table>
<thead>
<tr>
<th>INSPECTION POINTS</th>
<th>PASS</th>
<th>FAIL</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Check that the beam clamps are installed horizontal within + / - five degrees.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Check that endstop bolts are present and have locknuts installed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Using a torque wrench, check that all bolts are present and torqued to values shown on Assembly Drawing.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Check that splices, if supplied, are centered on track joints.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Verify that capacity labels are present, attached, and legible. See Label Placement Drawing.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6. Verify that the number of trolleys matches the value on the capacity label.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7. Verify that the fall arrest system is not being used for material handling.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8. Check the track for levelness within + / - 1/4 inches per 20 feet of track.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>9. Check the track flanges. Track flanges cannot be bent downward more than five degrees.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10. Check the track thickness. Track thickness cannot be worn more than 10 percent.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>11. Check all system welds for cracks.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>12. Check system components for corrosion and bent or damaged areas.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>13. Check that all wheel studs, if supplied, are torqued to value shown on Assembly Drawing. Note that these 1/2-inch wheel studs have a different torque value than the system's other 1/2-inch bolts.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>14. Verify trolley can traverse entire length of track without snags.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>15. Check trolley for visibly bent swiveling connector, broken welds, or excessive wear or corrosion.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>16. Test the operation of the trolley's swiveling connector and verify that it can rotate freely.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>17. Test the operation of the trolley and verify the wheels rotate freely.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>18. Check system components for loose components.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>19. Check system components for loose or missing fasteners.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>20. Check system support structure for stability.</td>
<td></td>
<td></td>

Notes
PRODUCT WARRANTY COVERAGE

Rigid Lifelines® warrants its products to be free from defects in material and workmanship as follows:

- Engineered Track Equipment: Ten (10) years
- Wearable End Truck Wheels/Anchor Trolley™ Wheels and Teeth: Ten (10) Years
- Soft Goods, Devices, Connectors, and Accessories: One (1) Year
- Motorized Products and Drive Components: One (1) Year
- Paint and Finishes: Two (2) Years

Ten-Year Warranty Coverage:

- Defects in equipment material and workmanship of manual track systems and equipment
- Wearable parts (End truck wheels and Anchor Trolley wheels and teeth)

Rigid Lifelines warrants its manual Anchor Track™ Systems and equipment to be free from defects in material and workmanship for a period of ten (10) years or 20,000 hours, commencing on the date of shipment to the first retail purchaser. This warranty extends to non-wearable parts only, with the exception of the wheels supplied on end trucks and Anchor Trolley wheels and teeth.

Two-Year Warranty Coverage:

- Paint coatings and finishes

Rigid Lifelines warrants its paint and finishes for a period of two (2) years. Warranty claims related to coatings must be accompanied by documentation of the product’s application and environmental conditions from time of delivery to time of claim.

One-Year Warranty Coverage:

- Defects in equipment and workmanship of motorized systems and equipment
- Defects in soft goods, devices, connectors, and accessories

Rigid Lifelines warrants motorized equipment to be free from defects in material and workmanship for a period of one (1) year or 2,000 hours, commencing on the date of shipment to the first retail purchaser.

Rigid Lifelines also warrants fall protection soft goods, devices, connectors, and accessories to be free from defects in material and workmanship for a period of one (1) year, commencing on the date of shipment to the first retail purchaser.

Warranty Terms and Conditions:

Rigid Lifelines’ obligation under this warranty is limited to the replacement or repair of Rigid Lifelines’ products at the factory or separate location approved by Rigid Lifelines. Other than the above mentioned warranty, Rigid Lifelines will not honor any other warranties—whether expressed, implied, or statutory—and disclaims any warranties of merchantability or fitness for a particular purpose. Rigid Lifelines has the right to reject any warranty claim due to harsh and/or inappropriate environmental conditions.
Rigid Lifelines® Is Not Liable for:
- Indirect, incidental, or consequential damages including lost profits, operating costs, loss of production, or travel expenses
- Components or accessories not manufactured by Rigid Lifelines (with the exception of soft goods components and accessories sold and warranted by Rigid Lifelines) Defective equipment or system failure due to misuse, negligence, improper installation or maintenance
- Equipment that has been used in excess of its rated capacity or beyond its service factors
- Equipment that has been altered without Rigid Lifelines’ written authorization
- Damage incurred by freight carriers
- Any loss, injury, or damage to persons or property resulting from failure or defective operation of material or equipment
- This warranty is void for any product that is designed to deform or absorb energy during a fall event and needs to be replaced after a fall event has occurred

Reimbursement Disclaimer:
- Written notice of any claimed defect must be given to Rigid Lifelines within ninety (90) days of shipment
- All requests for reimbursement must be accompanied by proper documentation
- Reimbursement is provided in the form of a credit unless otherwise approved by Rigid Lifelines’ management
- Reimbursement for labor will be provided at a maximum rate of $75 per hour
- All reimbursement is subject to approval by Rigid Lifelines’ management

SERVICE POLICY
1. Obtain as much information as possible concerning the problem through personal observation by yourself or other authorized personnel familiar with the job and equipment: include model, serial and/or part numbers, voltages, speeds, and any other special identifying features. Be prepared to discuss the situation in detail.
2. All authorized labor charges will be based on straight time. Hourly rates, estimated man hours, and not to exceed total dollar amount required for corrections are to be agreed upon before authorization is given. There will be no allowances for overtime except in dire emergencies and then only with prior approval.
3. A verbal agreement may be reached immediately on both the method of correction and the approximate cost. A warranty authorization number will be assigned for the specific incident. A confirming written authorization will be forwarded to the distributor.
4. The distributor must send an itemized invoice showing our release number or invoice number and warranty authorization number after authorized corrections have been made. A credit memo will be issued by accounting after the invoice has been received and approved. Warranty charges ARE NOT to be deducted from outstanding open account invoices under any circumstances.
5. Any field corrections made prior to an authorization by Rigid Lifelines will not be accepted as a warranty charge or the responsibility of Rigid Lifelines. Any modification to the equipment made without prior approval of the seller will void all warranties. A verbal authorization for modification may be obtained, in which event a warranty authorization number will be assigned for the specific modification. A confirming written authorization will be forwarded to the distributor.
ABOUT RIGID LIFELINES®

OUR MISSION:
Rigid Lifelines is driven by passion for providing our customers with quality, user-friendly solutions to keep workers safer and more productive at elevation.

OUR COMMITMENT
Rigid Lifelines’ professionals are dedicated to designing and manufacturing a variety of fall protection systems that meet or exceed OSHA requirements and ANSI Z359 code. Our team of engineers and safety professionals combine over 30 years of experience in the fall protection industry to manufacture fall protection systems that utilize the most advanced technology and designs.

Rigid Lifelines’ production facilities are certified under the ISO 9001:2008 Quality Management System to provide superior quality products. And every welder at Rigid Lifelines is certified to handle steel (D1.1) and aluminum (D1.2) in accordance with the rigorous requirements and lab testing established by the American Welders Society (AWS).

Rigid Lifelines’ engineers are involved with ANSI Z359 Technical Review Committee and the ANSI Z359.19 Rigid Horizontal Rail Standard. We also participate with the Safety & Health Technology Committee of the Association of Iron & Steel Technology. Our involvement allows us to keep a constant pulse on the trends in both industry practice and government regulation.

OUR PRODUCTION:
All of our systems are designed and manufactured in the United States of America. We have production facilities in Las Vegas, Nevada, and at our headquarters in Morgantown, Pennsylvania.
The following rigid lifelines:

- Label PN 5.401 through 5.418 are the required number thereof
