

## ANCHOR TRACK™ SYSTEMS GRIFFIN™

### Mobile Fall Protection for Many Locations

- Excellent for temporary applications, indoors or outdoors
- Fully assembled system can be lifted with large forklift or, with the proper options, towed

Rigid Lifelines® Griffin™ Anchor Track™ System provides rigid track fall protection with coverage up to 30 degrees off-plumb.

With typical overall weights of approximately 15,000 pounds for the Skidded Griffin and 19,000 pounds for the Wheeled Griffin, the entire system can be moved in minutes using a large forklift for the Skidded system or a heavy-duty pickup truck for the Wheeled system.

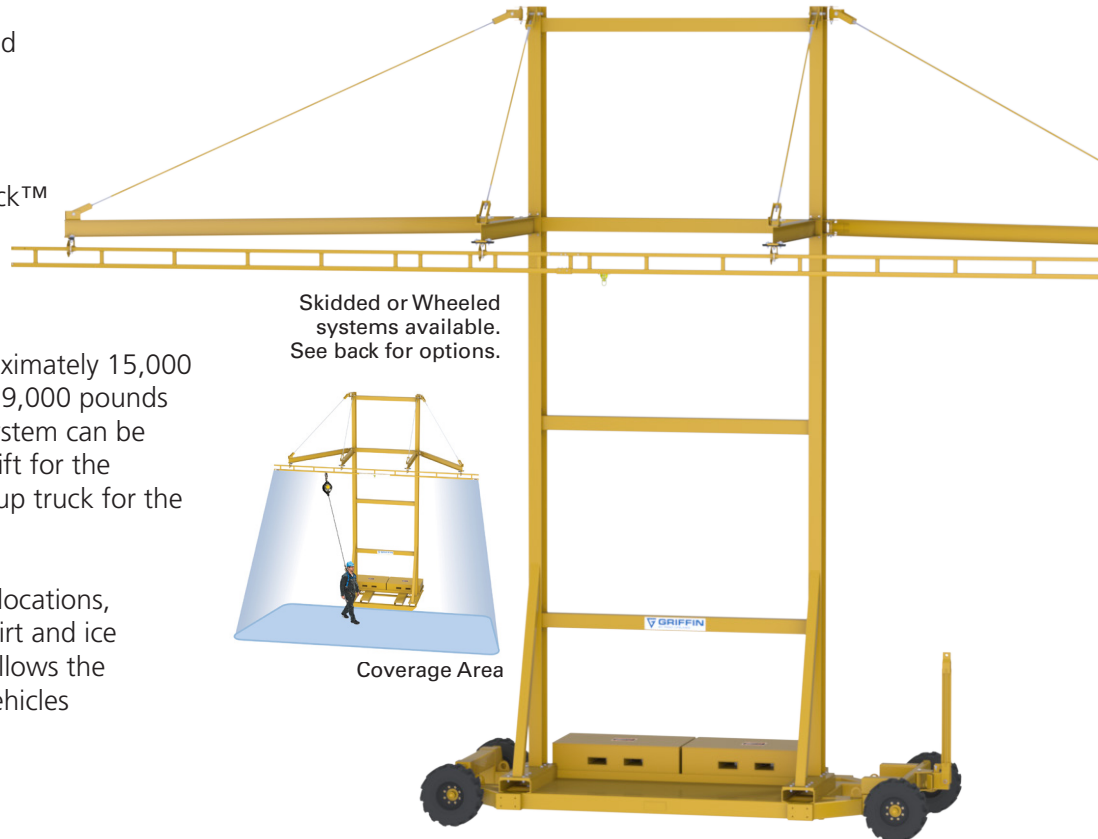

Frequently used in exposed outdoor locations, our enclosed track design prevents dirt and ice build-up, so the trolley effortlessly follows the users' movements as they traverse vehicles and other large equipment.

Wheeled Griffin comes with:

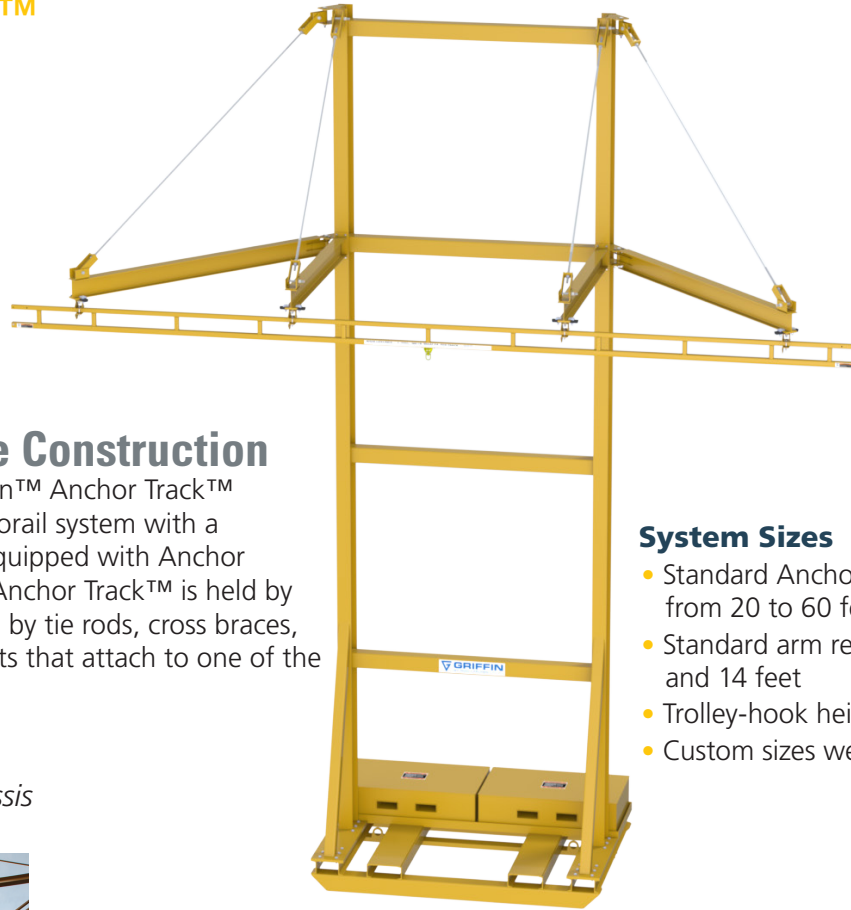

- Hard rubber tires
- Steerable rolling chassis
- Drawbar Eye Coupler (for Pintle hitch)
- Bubble levels, leveling jacks, bottle jack, and bottle jack plate for system leveling

### Application Examples

- Trucks: Loading, Securing, and Tarping
- Manufacturing and Maintenance of Large Vehicles and Equipment

## ANCHOR TRACK™ SYSTEMS GRIFFIN™

### No-Compromise Construction

The Rigid Lifelines® Griffin™ Anchor Track™ System is a portable monorail system with a counterweighted base. Equipped with Anchor Trolley™ technology, the Anchor Track™ is held by outrigger arms supported by tie rods, cross braces, masts, and counterweights that attach to one of the following bases:

- Skid-mounted base*
- Steerable rolling chassis*

### Application Options

- Single, dual, or multiple tracks for use by one, two, or multiple workers

Wheeled Griffin options:

- Dual steer with two tow bars, one at each end of the system
- Custom smaller sizes and configurations available

### System Sizes

- Standard Anchor Track™ lengths from 20 to 60 feet
- Standard arm reach is between 8 and 14 feet
- Trolley-hook height starts at 22 feet
- Custom sizes welcomed!
